Why a team

Junlin Yuan · Spartan Agentic AI Studio

This course

Scale — work far bigger than you could do by hand, or with 1 agent

Done well — runs reliably, thousands of times, at low cost

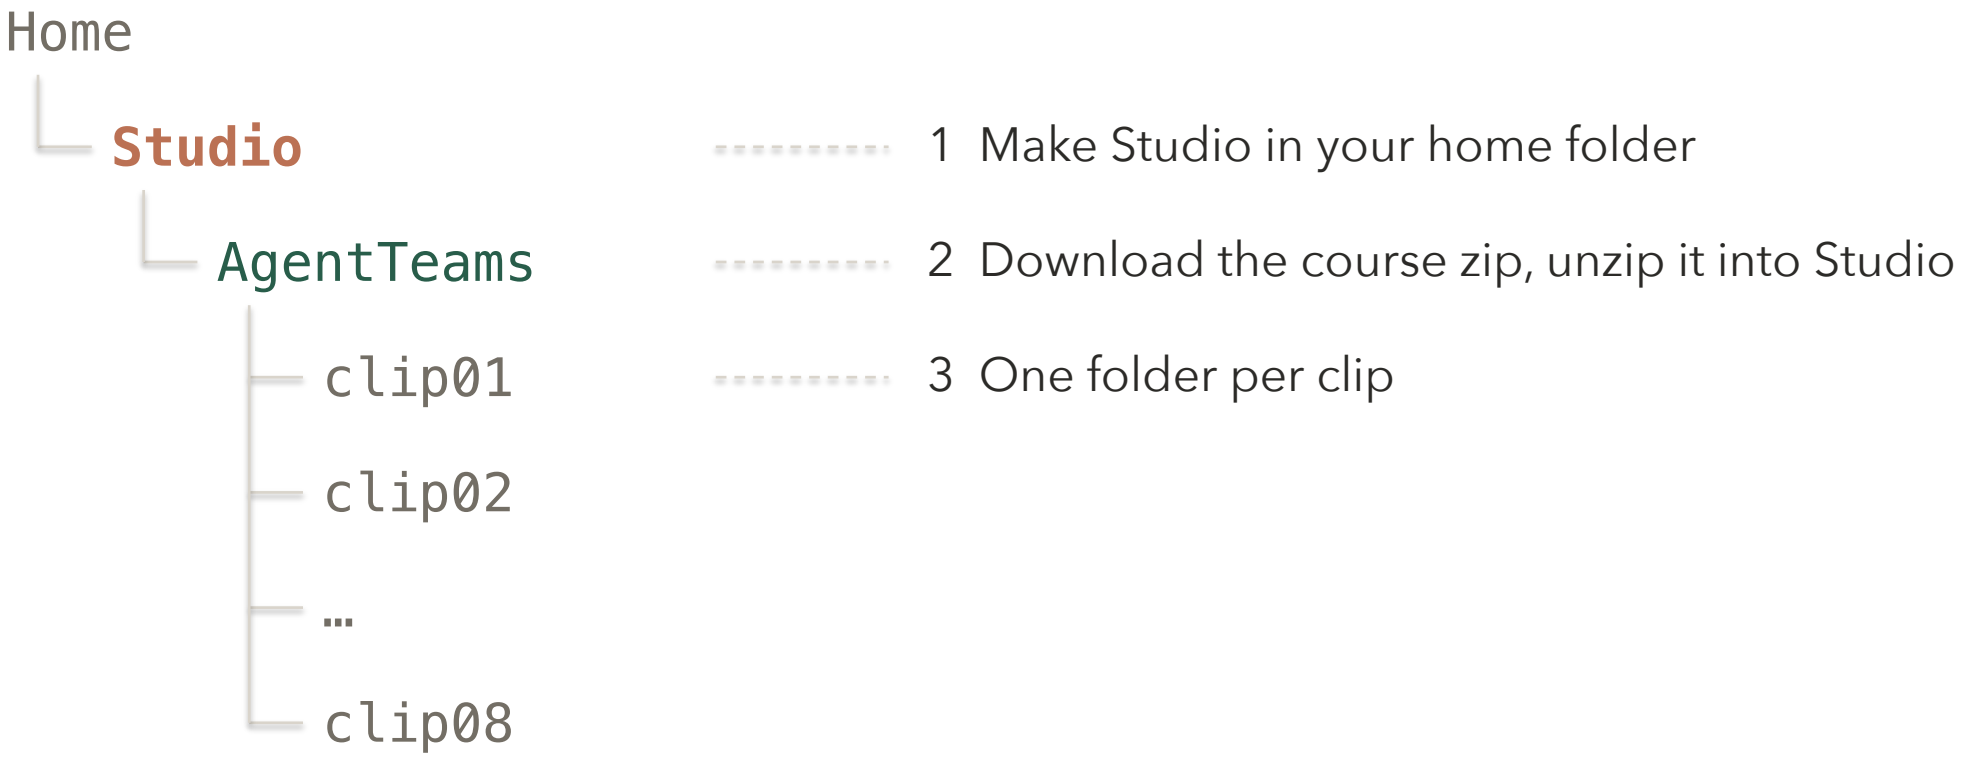

How it works — model, tools, context, roles

Optional — learn now or when a need comes up

Demo

Course files

Keep your own files out of these folders

Agent components

Model — the brain

Tools — web search, files

Context — files, rules, prompts you hand it

The harness: where the agent lives, talks to you, uses tools

Why tools: web search

MSU vs Eastern Michigan, Sept 12, 2026

35 MSU

7 EASTERN MICHIGAN

TOOLS OFF

an old game, or “can’t check”

+ WEB SEARCH

the right score, with the link

Why tools: file access

A made-up folder, as of Oct 18, 2026

Demo

MY_FOLDER

```
BIO_181_lab3_notes.md
essay_draft_v2.txt
fall_budget.csv
internships_to_apply.txt
```

TOOLS OFF

"I can't see your folder."

+ FILE ACCESS

All 4 files; lab report due **Oct 23**

Demo

Why a second agent

Same task: today's biggest news stories

Writer → **Checker** → **You**

searches the web,
writes the brief

opens every link,
can't edit

fix or leave?

Alone: a wrong link stays in.

With a checker: caught, and the team asks you.

A trade

	WRITER ALONE	WRITER + CHECKER
COST	about 1 cent	3 to 6 cents
TIME	about 1 min	about 3 min
WRONG LINKS	stay in	**caught**

Verification: an important step in any work done by AI

Moving toward a team

Why OpenCode

Any model — any provider, one key, through OpenRouter

No subscription — you pay per use

Carries over — Claude Code, Codex: the same ideas

Next: set up and run this team on your computer
