The full team

Junlin Yuan · Spartan Agentic AI Studio

Add an orchestrator

You talk to one agent; it calls the roles

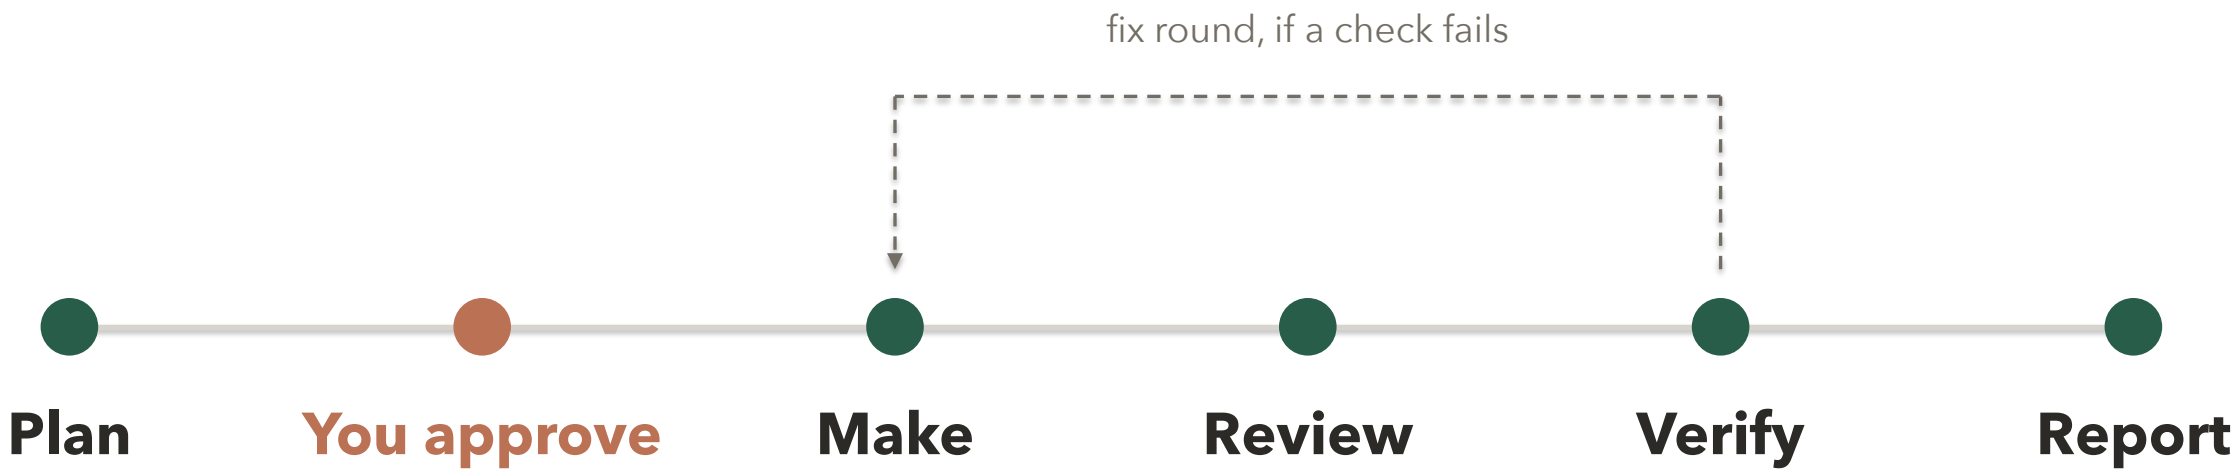

You → **Orchestrator**

Planner	writes the plan
Implementer	makes it
Reviewer	lists what to fix
Verifier	runs the checks
Report writer	writes report.docx

Own context per role: the orchestrator's stays clear
One job each: the work is checked with fresh eyes

Run order

Written in `do.md`

Demo

Talk to the orchestrator

`AgentTeams › clip03 › clip03_01_full-team`

> What agents do you have access to?

Then ask anything: “What does the verifier do?”

Run it

`/do today's 5 biggest news stories …`

Planner	Implementer	Reviewer	Verifier	Report writer
`plan.md`	`deliverable/`	`review.md`	`verification_report.md`	**`report.docx`**
plan + checks	the news brief	what to fix	PASS or FAIL	for you, in Word

The plan

"Today" a fixed cutoff time and time zone

Sources named and linked, with date and time

Checks listed before any work starts

The pause: trim the plan before you approve

orchestrator.md

```
---
mode: primary
permission:
  question: allow
color: "#3B82F6"
---
```

the agent you talk to

may ask you questions

nothing below: no prompt

do.md

the lines that matter

```
agent: orchestrator

The user's task: $ARGUMENTS

1. Planner. Show the user the plan … wait.

2. Implementer.

3. Reviewer, then verifier. On NEEDS FIX or FAIL…

If the plan is at fault, the planner revises it

4. Report writer.
```

for the orchestrator

your topic

the pause

fix round

replan if needed

A role file

`reviewer.md`, the lines that matter

```
description: Checks the deliverable and lists…
mode: subagent
  edit:
    "*": deny
    "runs/*/logs/review.md": allow
Reviewer. List the fixes … Never change it.
Last line: Verdict: NEEDS FIX or PASS
```

- when to call it
- not in the menu
- edits nothing…
- **…but its own log**
- its 1 job
- the orchestrator reads it

Our design: your own team can give its agents more freedom
