Design your checks

Junlin Yuan · Spartan Agentic AI Studio

The verifier decides when it's done

Who checks what

The balcony garden problem

EASY TO CHECK

HARD TO CHECK

Number

total ≤ $150

CHECK TYPE 1

Fact

the sun a plant needs, from a garden site

CHECK TYPE 2

General taste

plants that look good together, to most people

Your taste

My (secret) preferences, …

CHECK TYPE 3

Vague checks pass anything

The balcony garden

—

Make no mistakes

Good for my balcony

Useful to me

A nice garden

PASSES ANYTHING

+

Every fact from its source page

Sun 10 am to 2 pm: plants fine with 4 h

At least 2 herbs I cook with, in XYZ recipes

Best practice, looked up: meets the top 5

YES OR NO, EVERY TIME

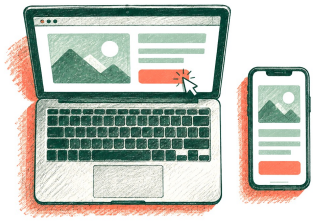

Check type 1 of 3: code

If code can check it, use code

Count it

e.g. 40 rows, total ≤ $150

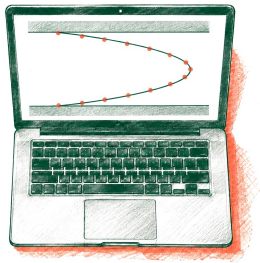

Run it

e.g. open the site, click through, screenshot

Match it

e.g. screenshot within 5% of your design

Test it

e.g. numerical solution vs. ideal exact/reference solutions

Check type 2 of 3: AI reads the source

Check each claim against its source

Good source?

e.g. MSU Extension's plant experts, not a seller's ad

Others agree?

e.g. a 2nd expert source also says lavender needs 6+ h of sun

Check type 3 of 3: taste

AI checks the form, you judge

Count — 60 songs, ~4 h, none twice

Mix — the genres you asked for

Real — each song found, with its link

Yours — does it feel like the trip?

Don’t know what to check? Ask it

> **“What’s the best practice for this?”**
>
> **“How would you judge this?”**
>
> **…**

Summary

Gate — the verifier decides when it's done

Checks — code, a source, or taste

Yours — own it, read it

Your turn: your checks: what to count, which page, what's only yours
