Tools

Junlin Yuan · Spartan Agentic AI Studio

Kinds of tools

Tools: anything the agent uses to get a job done

Built-in actions

read, run, search

Scripts

Command-line programs

MCP servers

Plugins

Skills

The mix and the names depend on the app: OpenCode, Claude Code, ChatGPT

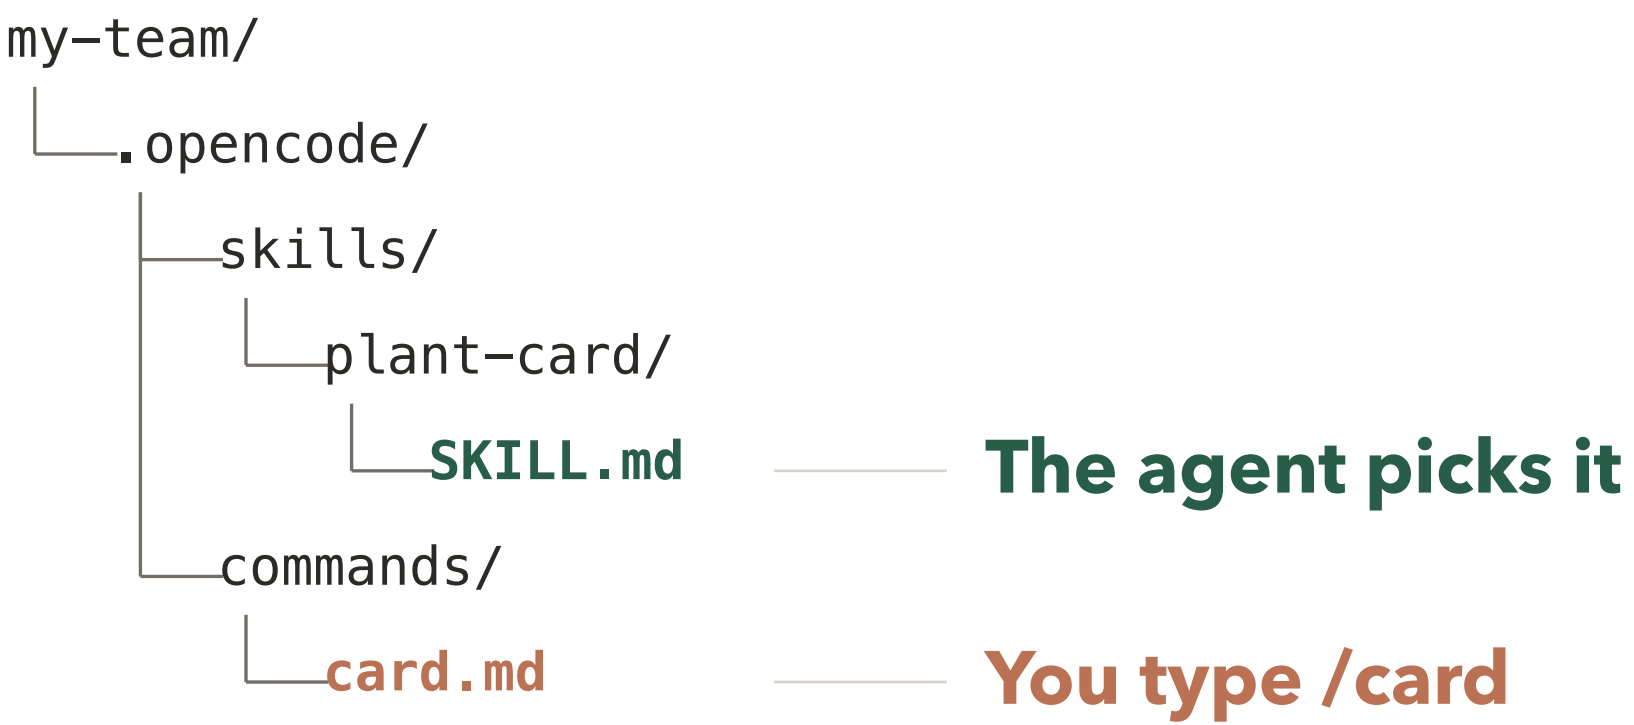

Kinds of tools: skill

```
Project/
└── .opencode/ (hidden)
    └── skills/
        └── plant-card/
            ├── SKILL.md
            └── scripts/ (optional)
```

```
---
name: plant-card
description: Use when the user asks
  about info of a plant.
---
Reply with three lines:
PLANT CARD: <plant>
Sun: <hours>
Water: <how often>
```

Skill vs. slash command

EXAMPLE: OPENCODE

The agent picks it

You type /card

Make your own skill

Check info on a plant

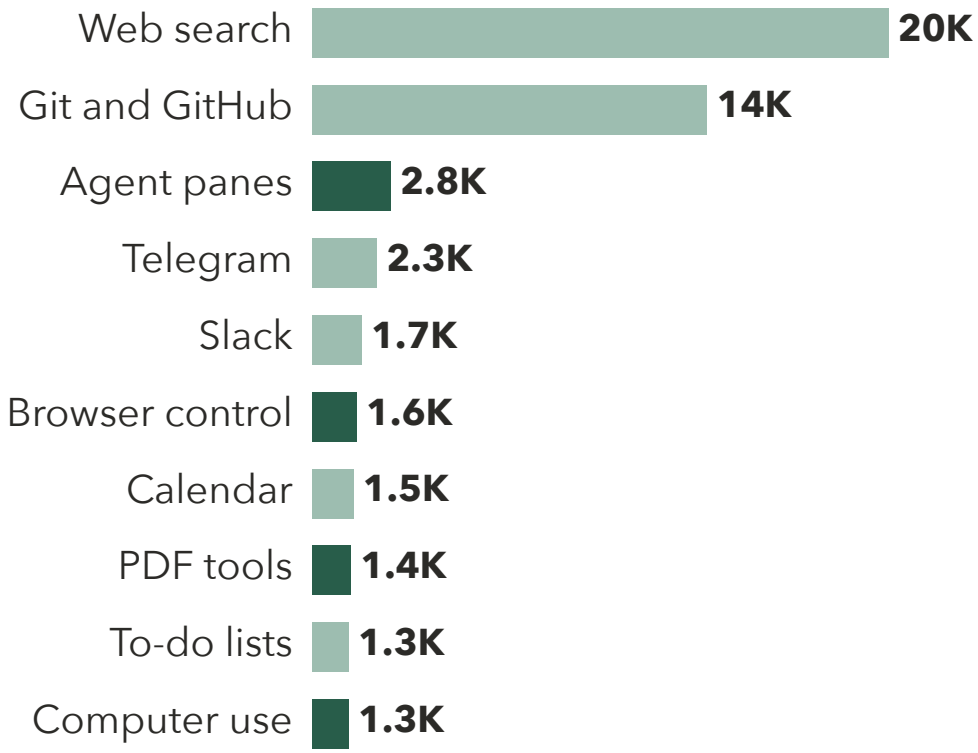

Do a task once with the agent

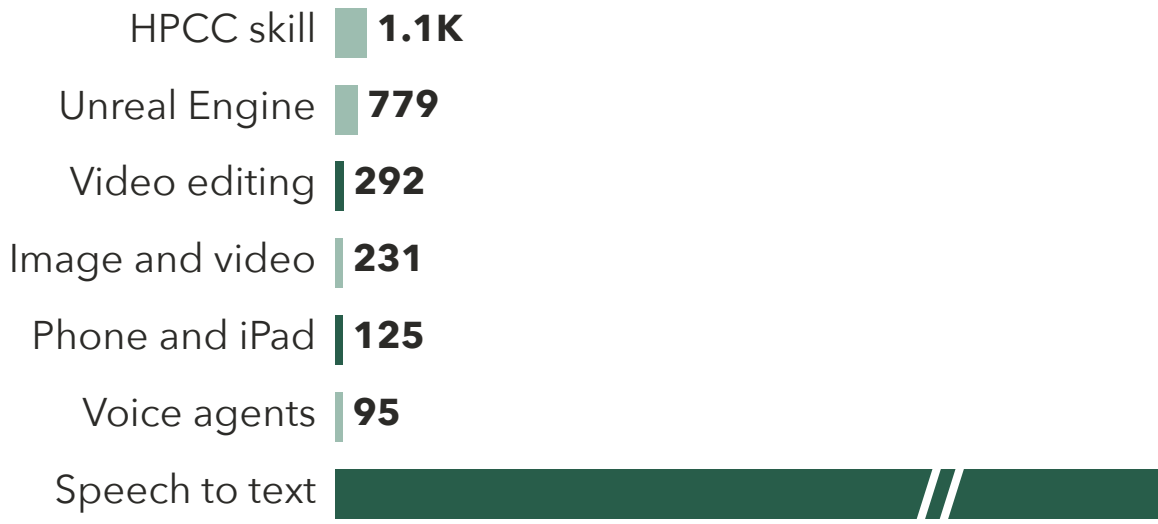

Say “turn this into a skill”, then read it

Test: ask for the task, don’t name the skill

My skills/tools

Times used by me and my agents, last two months

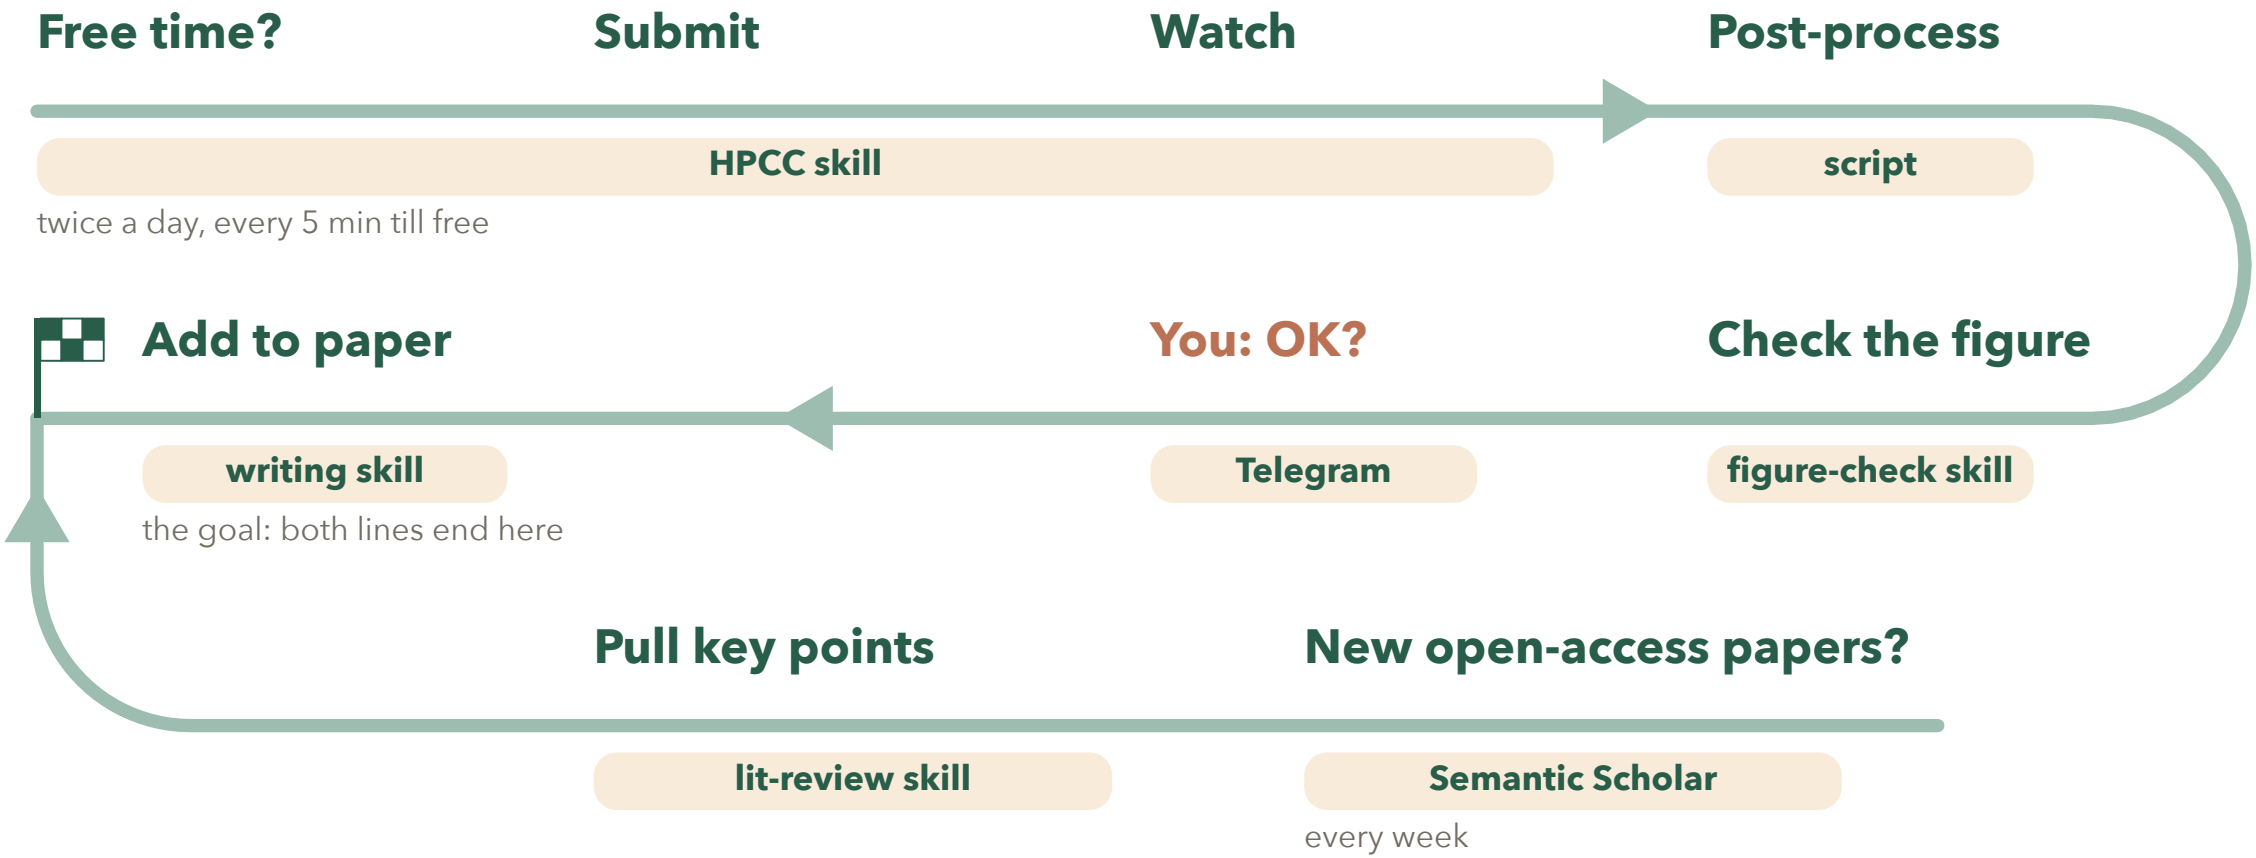

On my computer

Online or another machine

My skills: built and used with Claude Code and Codex

Tool chain 1 of 2: research

Tool chain 2 of 2: language practice

Find your next skill

> **“What slowed you down? What tools do you need?”**

After a few runs, ask the team

Summary

Tool — anything the agent uses

Skill — instructions the agent picks by their description

Chain — tools plus checks: long jobs on their own

Your turn: make a skill from a task you repeat
