The job: pick a future by its Tuesday

How the Tuesday team works

Planner → **You** → **Diary writers** → **Moment scorers** → **Verifier** → **You** → **Report writer**

10 moments, 50 jobs

rate moments 1–5 "How much you like the moment?"

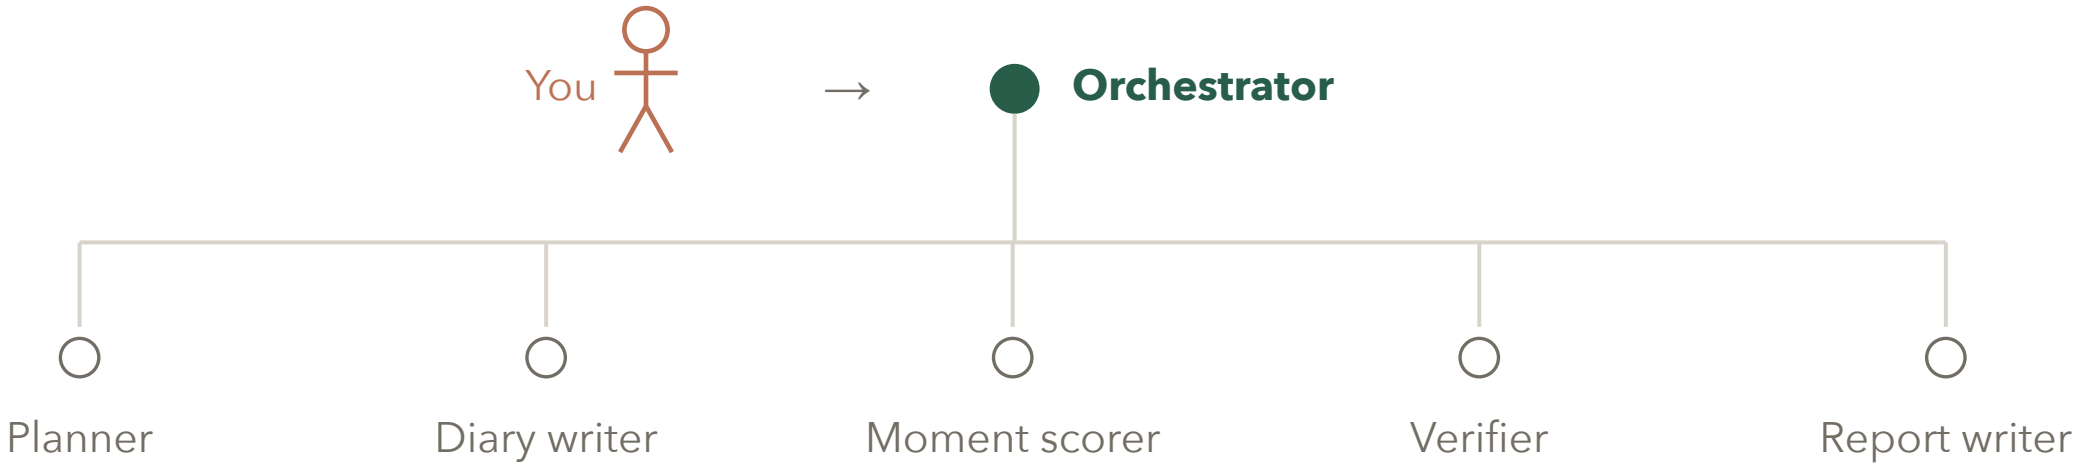

50 Tuesdays at once

50 diaries at once "How relevant is the moment in the diary?"

checks the run

pick 1 of the 5 best

writes your report

How the Tuesday team works

Before you build: the Tuesday job

PROBLEM	pick a job by an ordinary Tuesday, its name hidden until you pick.
INPUTS	none
SCOPE	only for this task, not general problems

CHECKS

1. No job name reaches you or the moment scorers before you pick, because then you would pick the job, not the day.
2. Every moment comes with a line copied word for word from its diary, as evidence for the verifier to check.
3. At least 8 in 10 moments show up in some diaries and not in others, because a moment every day has, or no day has, is not useful.

Building a team: copy and change

Copy the starter team. Keep what fits. Change a few short files.

```
---

description: Scores how clearly each moment shows in one diary
it is handed.

mode: subagent

permission:

  "*": deny

  edit: allow

---

Score each moment 0 to 5, with the exact line that shows it,
and save it where you are told.
```

how the orchestrator picks it

a helper, not the agent you talk to

no tools at all

except saving its scores

its job; the orchestrator adds the details each time
